“E-navigation will be developed to meet user needs. My advice to you ... get involved!”

Professor Lee Alexander
University of New Hampshire

Now in its ninth year, eNavigation 2009 will focus on the user: from the individual mariner, to the fleet manager, to waterways and harbour authorities, to regulatory and environmental agencies.

Said to be the only conference of its kind in the USA, eNavigation 2009 provides the operations sector of the maritime community with an opportunity to interact with the regulators, policymakers and international organizations making and implementing AIS and e-Navigation policy.

Conference Goals

1. To serve as a forum for users to learn about the e-Navigation concept, the status of its development and to learn how it may affect their segment of the maritime community.

2. To provide updates to users on how regulatory and legislative developments will affect them.

3. To provide information about technological developments in shipboard displays, communications, database management, improvements to components such as radar and Integrated Bridge Systems (IBS), and other innovations that will benefit e-Navigation users.

4. Present examples of successful e-Navigation applications; what they do and their benefits.

5. Assist in the identification of potential users of e-Navigation and their specific needs, so that through early identification they can be accommodated in system architecture development.
Delegates to Nav 08 / ILA37 Conference have been invited and are offered a discounted registration as indicated below.

**EARLY BIRD REGISTRATION DEADLINE**

November 10th is the last day to receive the Early Bird Registration rate for eNavigation 2009.
