The Royal Institute of Navigation has announced its first symposium on Unmanned Aerial Vehicles (UAVs). This important symposium has already attracted much interest from around the world across the UAV community, including manufacturers, academics and user organisations.

The invited speakers will be covering a number of navigation related topics concerning the design and operation of unmanned and autonomous aerial vehicles, which will interest the complete spectrum of those involved professionally with the topic. Including:

- Mission planning
- Terrain mapping
- Remote control
- Legislation
- Autonomous control
- Safety
- Navigation sensors & integration

**Networking and discussion**

The symposium will incorporate time for detailed formal discussions of the presented topics and the planned breaks, particularly lunch and the evening reception, will give delegates plenty of opportunities to interact at an informal level.

**Booking and further Information**

In order to book your place at the UAV NAV Symposium and for further information readers are invited to contact Sally-Anne Cooke, the RIN Conference and Events Manager, at conference@rin.org.uk or on +44 (0) 207 591 3135.
